

Senior UX/UI Designer with 18+ years of experience driving user-centered design for software solutions in digital forensics and financial services. Led research and design to support 30 developers across 6 product groups, partnering with over 200 stakeholders to deliver solutions used by thousands of customers. Reduced research synthesis time by 33% through AI-powered workflows while improving design consistency and stakeholder alignment.

EXPERIENCE HIGHLIGHTS

UX/UI Designer

- Integrated AI into UX research and synthesis by working with AI agents to create reusable skills that summarized, tagged, and categorized interview and usability-test transcripts into consistent, actionable themes. Defined the workflow (inputs, prompts, taxonomy, and output templates), established light governance (quality checks, redaction/handling of sensitive content, and versioning), and set up a shared repository to host and archive prototype code so the team could reuse and iterate on the approach.
- Built AI-powered research synthesis system that reduced analysis time by 33%, processing 40+ interview and usability test transcripts into actionable insights. Created reusable AI skills for summarizing, tagging, and categorizing user feedback using consistent taxonomy. Established governance framework with quality checks and sensitive content handling, deployed shared code repository adopted by 30+ team members across 6 product groups.
- Designed user interfaces using whiteboard sketches, wireframes, and interactive browser-based prototypes. These were documented within screen flow diagrams, UI walkthroughs, and UI specifications.
- Facilitated design reviews and led walkthroughs of prototypes for internal and external stakeholders and customers. These sessions included team members, customers, and management.
- Conducted usability inspections and tests on prototype designs to ensure they met user needs. Feedback from these sessions was incorporated into the design for subsequent testing.
- Worked closely with developers during implementation to resolve technical and design issues. I attended daily standups and participated in developer demos to identify and resolve issues as quickly as possible.
- Provided field engineers with CSS changes to address customer requests.
- Projects included:
 - Desktop and web-based applications for acquiring and analyzing digital data obtained from devices ranging from phones, computers, cloud, video, and vehicles.
 - a desktop/mobile web application for branch tellers to conduct customer transactions
 - a desktop web application for configuring, administering, and performing cheque-based scanning
 - an end-to-end Windows-based solution for capturing, correcting, and submitting cheque data

SKILLS

Team leadership
UX architecture
UI design and development
Usability testing
AI integration
WCAG compliance
Documentation

UX TOOLS

Figma Design
Figma Make
Sketch
Axure
Visio
PowerPoint
Photoshop
GIMP
Inkscape

BUSINESS TOOLS

JIRA
Confluence
Slack
Teams

CODING

Agentic coding
Claude Code/Codex
HTML
CSS/Sass
JavaScript/JQuery
Bootstrap / Material UI
Python
AngularJS
Visual Studio (VB)
VS Code
SVN/GitHub

- a collection of web applications for submitting, monitoring, reviewing, and exchanging cheque data
- an operator performance support system for cheque scanning middleware

UI Product Owner

- Contributed to and wrote JIRA stories and epics to define requirements around user interaction. Stories included links to mockups and other design artifacts to assist developers with implementation.
- Shepherded stories through the Agile process to ensure products met design requirements.

Miscellaneous Projects

- Updated the CSS for a legacy suite of application as a cost-savings alternative to re-development.
- Led and conducted accessibility reviews of a web application to ensure that it followed WCAG 2.1 guidelines and complied with ADA and Section 508 standards.
- Designed and coded the presentation layer for retail web sites using a responsive design approach to support a wide range of client devices.
- Developed Python-based GUI tools to test the operator interface for a variety of cheque processing scanners.

WORK HISTORY

- User Experience Designer, Magnet Forensics (Dec. 2022 – Present)
- User Experience Designer, NCR Waterloo (2005 – Nov. 2022)
- Technical Writer, NCR Waterloo (1994 – 2004)
- Contract, TextWORKS, Kitchener (1993)

EDUCATION

- University of Waterloo, B.A., Honours Co-op English, Rhetoric and Professional Writing (1993)

AWARDS

- Patent application associated with IDR #191167, "Making Passport Deposit Review Easier" (2020)
- NCR Local R&D Award for "Prototyping Management Console with Flex" (2010)
- NCR Local R&D Award for "Out-of-Sync Repair User Interface" (2009)
- NCR FSG Outstanding Technical Achievement Award for Usability, "WiseIP Operator performance support tool" (1999)
